Technology that keeps you ahead

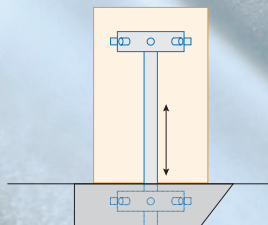

CABIN

- Tunnel over-pressured at 20 mb
- Air volume is renewed 20 times per hour
- The over-pressure is created by air filtered according to ISO7 (or class 10000)
- H14 class HEPA filter

IN LINE CAN CLEANING BY BLOWING FILTERED AIR

- In line can cleaning by blowing filtered air (after ionizing)
- The blowing heads are driven up and down inside each can to cover the complete surface
- The blowing air is filtered at 1 μ m after a pre-filtration at 5 μ m

CONTROL PANEL

- Blowing head stroke and timings are adjustable from the control pannel
- Settings can be recorded in each can recipe

OPTIONAL IONIZER FOR BOTTOM AND TOP ENDS
