

Best Bubbles

Micro Leak Detector

BEST BUBBLES is a simple and fast way to identify leaks on refrigerant lines and on the components of a refrigeration and air conditioning system. Its special formulation allows to operate on very cold (down to -40°C) or hot (up to $+80^{\circ}\text{C}$) pipes, ensuring an highly visible result. It strongly grips on surfaces, properly adhering even in vertical and on angled fittings. It does not damage the metal of the system pipes.

Instructions: dispense **BEST BUBBLES** on a system while running or in any case under pressure, in the proximity of where it is believed there may be a leak. In the presence of such escape, the film formed by **BEST BUBBLES** will swell and form a series of large highly visible bubbles. At the end of the operation, remove product residues with a cloth or paper.

The product is not dangerous.
