

HMX Submersible mixer

OPTION

EDDY PROTECTION

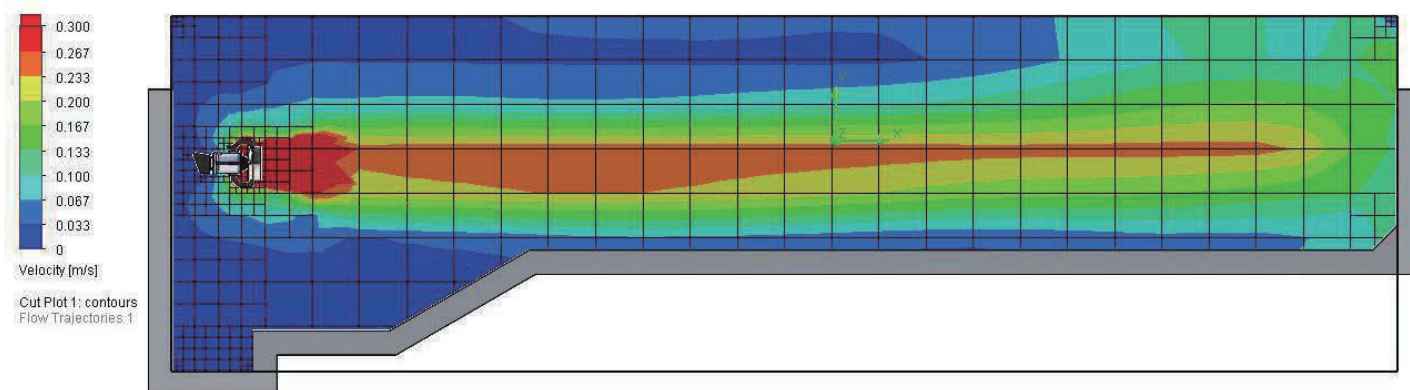

The eddy protection protects agitator from swirl of air made from surface of impeller. Also, it makes higher efficiency and reduces vibration noise. It can be used in shallow fluid or somewhere that agitator should not be exposed on the surface of fluid.

Lifting device

The lifting device improves efficiency in process of lifting. It should be installed at high-efficiency-stirring water level. It allows easier inspection, repair and maintenance of agitator. Also, easier lifting up and putting down of agitator makes work more simple.
