## HIGH VOLTAGE MOTOR SQUIRREL CAGE INDUCTION

**HIGEN MOTOR**

## HIGEN MOTOR

Transforming from  
one of the hidden champions  
to a global leader

1963  **LG GROUP**

2008  **HIGEN MOTOR**

The legacy of HIGEN MOTOR dates back to 1963, when LG Group of Korea started motor production for import substitution.

Later in 2008 the motor division was spun off as an independent corporation under the name of HIGEN MOTOR opening the new horizon of HIGEN era.

HIGEN MOTOR is the only motor specialist company in Korea encompassing this broad spectrum of motors and has international certificates in each product categories such as ISO, CE, ATEX, EtherCAT among others.

For EtherCAT particularly, HIGEN MOTOR is the first company in Korea certified for reliable compatibility with many European controller units.

### History of **HIGEN MOTOR**

- 1962 Commenced the production of induction motors from Geumsung
- 1968 Affiliated for compressor motor technology with Hitachi, Japan
- 1976 Commenced the production of elevator motor
- 1979 Completed the Gimhae Plant
- 1986 Start of general purpose induction motor production
- 1996 Developed vector inverter motor
- 1997 Development of High Speed spindle motor for machine tools
- Commenced the production of high voltage Motor with YASKAWA Technology
- 1998 Changed the corporation to LG Industrial Systems
- Moved to Changwon Plant
- 2000 Launched LG · OTIS
- 2008 Establish HIGEN Motor Co., Ltd.
- 2010 Winning the Presidential award in the National Quality Management Contest
- 2011 ISO/TS 16949 Certificate acquired for Ev motor
- Developed 1,250kW Deep Sea Water Pump Motor for FPSO
- 2012 ATEX Certificate acquired (0.2 ~ 260kW)  
Registered with KEPCO as Qualified Vendor (~ 2,500kW)  
Passed EtherCAT Conformance Test for servo driver
- 2013 HYUNDAI MOTORS SQ certificate acquired for Ev motor  
Registered with HITACHI as subcontractor for mill motor  
Registered with HYUNDAI MOBIS as subcontractor for Ev motor
- 2014 Obtained IE3 certificate
- 2015 Supplied high voltage motors for pulverizer  
(Doosan – Vietnam Vinh Tan power plant)
- 2016 Supplied High Voltage motor for Morocco SAFI power plant
- 2017 Obtained IECEx certificate for dust explosion proof/Ex tb

The Changwon Factory in Korea

## N-series High Voltage Induction Motor

### HIGEN

has supplied high voltage induction motors to power stations, pumping stations and many other industrial fields. Through this experience, HIGEN could improve the quality of high voltage motors significantly and accumulated the reliability in design, manufacturing, testing, and installation. Especially, HIGEN has successfully developed a high voltage insulation system of 15,000volts class for power plants. HIGEN's HV motors adopt class F top level insulation systems, and its structure is designed and manufactured for low vibration and noise. Its deep slot or double cage rotor structure and special varnish treatment make HIGEN's HV motors able to run thoroughly in various load conditions, particularly high moment of inertia. HIGEN provides the motors either cast iron frame or steel fabricated frame complying with IEC standards. HIGEN's experience more than half a century can design, produce and build highly versatile, easy-to-maintain range of motors suitable for the most heavy duty applications.

### HIGEN N-Series

mean High Performance and Small Size. For the significance of energy conservation and environment protection, the needs for smaller frame sizes, and the high efficiency and quality reliability are the current market requirements. These are the key reasons that led to the development of the HIGEN N-series. HIGEN N-series are supplied to a variety of industries including the oil & gas, paper, chemical and steel industries. They are installed to drive pumps, compressors, blowers, refiners, mills, conveyor belts and other machines. Indeed, the innovative technology of the HIGEN N-series sets new standards for HV motors.

### FEATURE

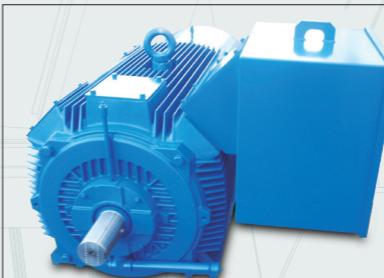

- High power efficiency and low maintenance costs
- Compact design, small dimensions and low weight
- Reliable and durable bearing structure
- Low vibration and noise
- Windings at temperature class F (VPI)
- Reliability and long life
- High load capacity
- Customized design

### APPLICABLE STANDARD

The motors comply with IEC34 standards. And special versions (NEMA, CSA, etc.) are available upon request.

### Types of N Series

#### NF Series

NFE (TEFC, IC411, IP44/65)

NFD (ODP, IC01, IP22)

#### NH Series

NHE (TEAAC, IC611, IP44/65)

NHEW (TEWAC, IC81W, IP44/65)

NHD (ODP, IC01, IP22/23)

NHDO (ODP, IC01, IP24W)

#### NB Series

NBD (ODP, IC01, IP22)

NBDA (ODP, IC01, IP22)

## Model Nomenclature

### N H D V - 450 E

#### SERIES

**N**-New Series

#### STRUCTURE

**F**-Fin cooling on the frame surface

**H**-Hat cooler/silencer on the top of frame

**B**-Air pass beside of the frame

#### ENCLOSURE / COOLING

**E**-Enclosed air cooling -IP44/65, IC411/6 or IC611/6

**EA**-Advanced model of E (structure F only)

**EW**-Enclosed water cooling -IP44/65, IC81/86W

**D**-Drip proof, open machine -IP22/23, IC01/06

**DA**-Advanced model of D (structure B only)

**DO**-Outdoor use of open machine -IP24W, IC01/06

#### SPECIAL SPECIFICATION (if necessary)

**B**-For belt pulley use

**V**-Vertical mounting (V1,V5,V15,V3,V6,V36)

**F**-Horizontal mounting with flange (B5,B35)

**Xn**-Explosion proof, Ex-n

**Xe**-Explosion proof, Ex-e

**Xd**-Explosion proof, Ex-d

**Xtd**-Explosion proof, Ex-td

#### FRAME SIZE

**IEC**-280 to 630

**NEMA**-4400 to 10800

#### FEET LENGTH

**IEC**-E, F, G

**NEMA**-08, 09, 10, 11

## Construction of N-Series

#### Frame

Steel fabricated or cast iron as a structural component of the motor is available and both of frame types can hold, support and protect the active magnetic part. With rugged structure, it provides the motor with high strength and low vibration levels.

#### Stator

It is the active magnetic static part of the motor. It consists of a core of pressed steel laminations in which slots the coils forming the stator winding are inserted. The stator core is mounted directly in the frame.

#### Winding

The winding process adopted by HIGEN is especially developed for the voltage and application of the motor. The low and high voltage motors can have circular and form-wound coils manufactured of copper wire; after the winding, they are completely insulated with porous mica tape. Conductive tapes are also used in the winding process, covering the coils and ensuring their resistivity.

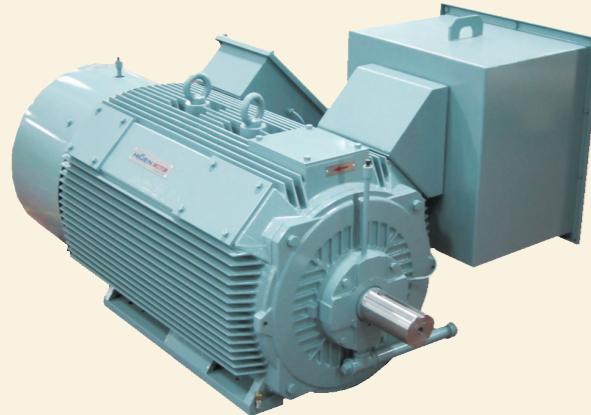

#### Insulation system

HIGEN "Polytight T" insulation system is based on the VPI process(Vacuum Pressure Impregnation), which was developed together with the world's most renowned suppliers of insulating materials. Using special epoxy resins, this system ensures perfect insulation of the motor coils, in a process totally free from emission of gases harmful to the environment.

#### Rotor

It is the rotating component of the electric motor consist of the shaft and pressed steel lamination core. The cage is mounted in the slots of the core. The cage can be made of cast aluminum, copper or brass. Computerized balancing equipment controls the accurate balancing of the motors. As a result, HIGEN motors present very low vibration levels. The standard balancing process is conducted in two planes.

# NF Series

NFE(TEFC)

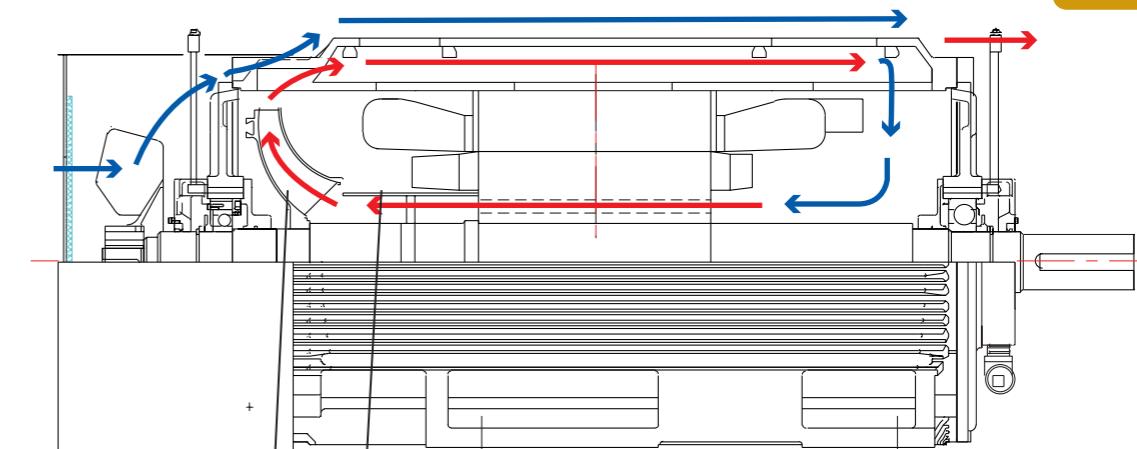

NFD(ODP)

**NFE/NFEA ; Totally Enclosed Fan Cooled (TEFC)**  
**NFD ; Open Drip Proof (ODP)**

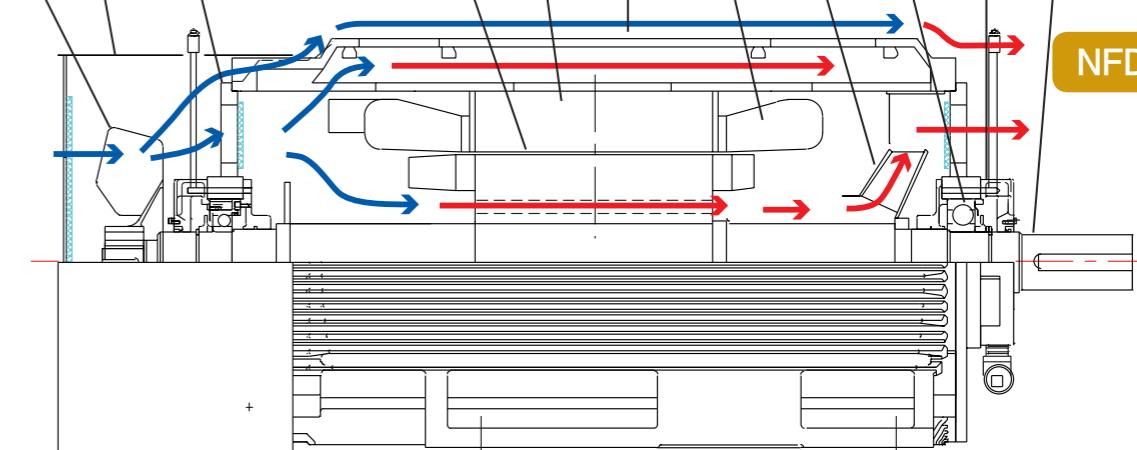

- Robust solid high strength cast iron frame
- Interchangeability with existing motors (steel frame)
- High efficiency and reduced noise level design
- Self cooling (forced cooling for VFD applications as optional)
- Easy maintenance structure

Squirrel cage Rotor	Aluminum Die casting (CU Bar as optional)
Poles	2p ~ 16p
Voltage	380V ~ 13.2 kV
Output Range	75 ~ 1,000 kW
Construction	B3 (V1 as Optional)
Frame Number	Fr.280 ~ Fr.450 (only Fr.280 & 315 for NFD)

## NB Series

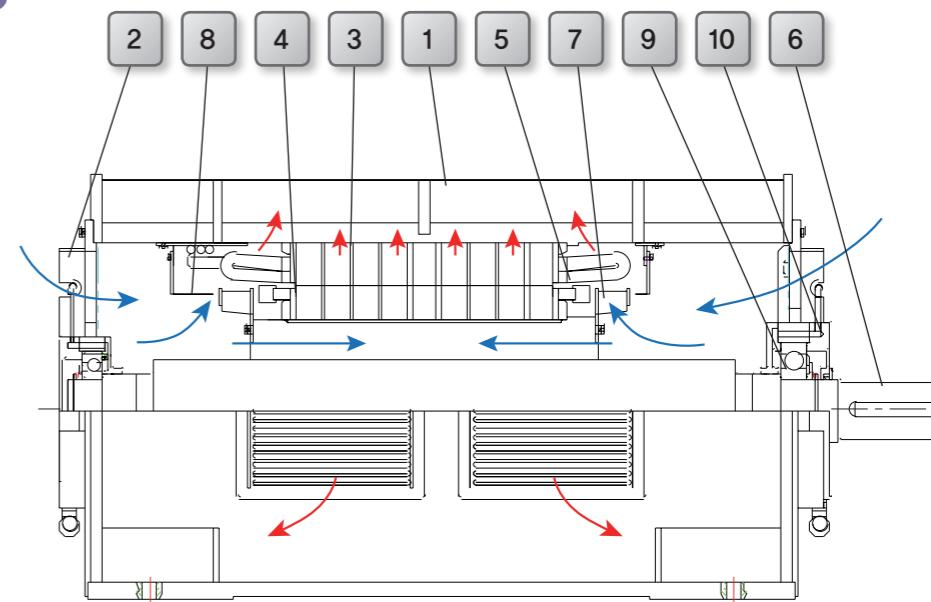

**NBD : Open Drip Proof (Both ventilation)**  
**NBDA : Open Drip Proof (One-way ventilation)**

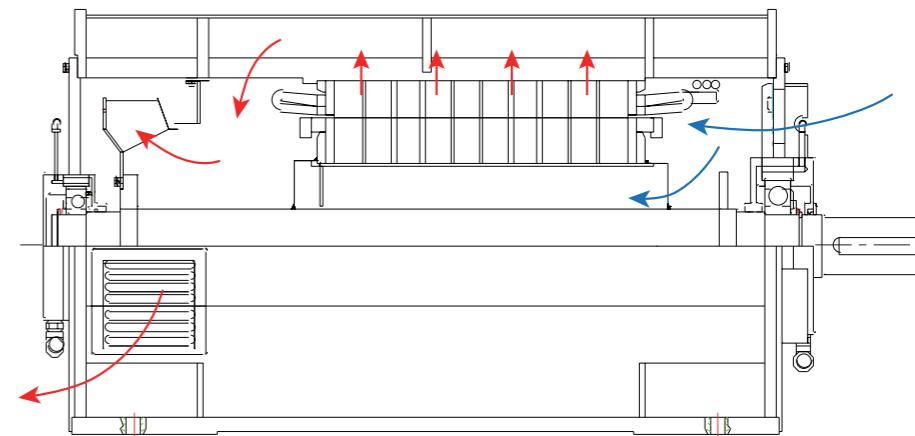

- Robust solid and high strength of Steel frame
- Cost reduction type specialized for low speed
- Reduction of installation area with small size and light weight
- Easy and low cost maintenance

## Sectional Drawing

NBD

NBDA

Squirrel cage Rotor	Brazed rotor with CU bar & ring
Poles	6p ~ 24p
Voltage	600V ~ 13.2 kV
Output Range	250 ~ 3,500 kW
Construction	B3 (V1 as Optional)
Frame Number	Fr.355 ~ Fr.560

### Parts No & Name

- |            |          |                 |                   |
