Head mounting type temperature transmitter (RTD only)

Model: R912 (with T990)

Spec. sheet no. RD09-02

Service intended

These transmitters are recommended be used in the situation where the application of RTD signals to carry to a long distance or to guard against the heavy electrical field noise. The transmitters convert RTD inputs to an analog signal for a direct interface with indicators, recorders, controllers, PLC, DCS systems, and these can be used for a wide range of applications in process control, automatic machinery and hydraulic or pneumatic system design.

Advantages

- Two wire 4 20 mA current output signal
- RTD input
- Measuring range from -50~400 °C
- Fixed range
- Excellent accuracy and long term stability
- Low cost
- Miniature design
