EVERDIGM DURAWING90

DURAWING90 is a concentric overburden system designed for casing of 125 mm diameter hole, specialized through hard formation into bed rock.

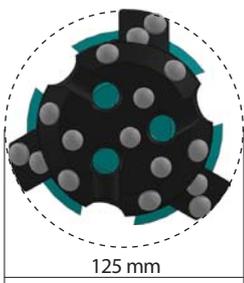

The wing bits are enclosed on pocket area making it the most professional & efficient system in the market as it is free from clogging in loose overburden material while it go down to bedrock. When the drilling starts wing bits come out with unique cam sliding mechanism. The key feature of DURAWING90 is the self actuating wing bit system that is not related with unpredictable ground condition.
