[Introduction]

TS-60 is built-in Non contact Infrared thermometer and smoke sensor.

The most of existing temperature and smoke sensors in markets can detect fire after the heat reach to temperature and smoke detector.

However, TS-60 detects the fire by increased infrared amount and low concentrated smoke in early stage of the fire and enables to prevent the fire in advance.

[Features]

_ Non contact Infrared thermometer can measure a wide range of temperature from -70°C to 380°C '

– The user can adjust the alarm temperature by DIP switch

– Low Concentrated Smoke Detection

It is designed to support the safety of industrial automation precision equipments so that it is suitable for low concentrated smoke detection

– Digital Process

Digital process based on built-in micro processor realizes various artificial intelligent functions which result in more convenient, more accurate, and more efficient detection environment.

▲ fire of switchboard _ TS-60 minimize the damage by early detecting of these fire.
