

## STA (Single substrate Transfer type Autoclave) SYSTEM

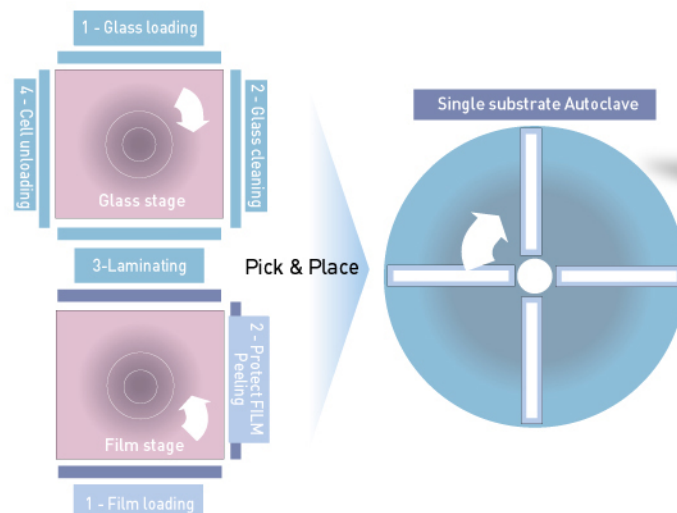

枚葉式 加圧 脱泡 装置

It is equipment which improves adhesion power and eliminates air bubbles from inside between two films or glass - film by applying heat and pressure on the LCD or PDP glass. Materials pass through the conveyor from the front door and once the process is complete, the product will be automatically unloaded to the rear door.

### → Product Feature

- 01 Designed to fit perfectly to operate to attach the Pol.film and eliminate the air bubbles .
- 02 It is possible to compose the in-line system with Pol.film Attachment.
- 03 Customized tact time
- 04 Automatic Feeding
- 05 There is no danger in accident of explosion etc...
- 06 Utility consumption decreases.
- 07 It is not necessary to use transportation device such as pallet or cassette.
