

Field Services

Our proven abilities in the management of large and complex projects ensures swift and efficient execution of field service work irrespective of location.

The performance of a thermal insulation system is as dependent upon the quality of its installation as it is upon the quality of the material itself. Given the complexity of many subsea structures, the application of insulation material can present considerable difficulties especially in terms of access, efficiency and completion schedules. For this reason we have developed experienced field service teams comprising highly trained professionals to ensure a total insulation service that assures product performance and quality.

This expertise in the application of insulation systems has won international recognition and has proved to be an extremely cost-effective service for our clients in terms of time, logistics and protecting their investment.

In addition to highly experienced personnel, we have invested in state-of-the-art mixing and dispensing equipment. This hardware is expertly utilised to provide a functional and robust delivery system capable of applying insulation materials to even the most complex subsea equipment structures. This equipment has been designed to ensure ease of mobility and is housed in specially converted container units for ease of handling.

By combining the best people with the most up-to-date technology, we are able to offer a global service. Provided there is access to normal utility supplies of power, water and compressed air, our specialist equipment will operate in diverse territories, with units already operating in the Americas, Europe and West Africa.

We are fully aware that complex field work can incur costs for customers and as such, we ensure that all our teams are fully briefed on the requirements of each project well in advance ensuring time spent on site is optimised to provide the best value to the customer. Our proven abilities in the management of large and complex projects ensures swift and efficient execution of field service work irrespective of location or complexity of structure.

In addition to the highly skilled service teams that we provide, we can also supply supervisory labour. We recognise the benefits of using local labour and we can provide personnel and training to maximise the local presence in the insulation process.
