

Ladder Fenders

Ladder Fenders are very robust but remain flexible to reduce accidental damage and help protect the wharf when small craft berth.

ML Modular ladder marine fenders are flexible, corrosion resistant and can withstand most accidental impacts from smaller vessels. The step modules are made from polyurethane and can be linked together, combined with extensions and a variety of optional handrails to suit many applications.

The LF-250 integrates the functions of a ladder and a fender into a single unit. They are very robust but remain flexible to reduce accidental damage and help protect the wharf when small craft berth. Available in a range of lengths, the LF-250 ladder can also be fitted with a rubber encased chain extension to suit overhanging structures.
