

SINJIN PRECISION CO., LTD.

Flow Control Valve

The flow control valve is a pressure compensation flow regulating valve. It supplies constant oil flow to a regulated port regardless of the inlet port flow.

Dimensions

* Specifications

Max. System Pressure: 210 bar (20.6 MPa)

Max. Flow : 118 lpm

Controlled Flow : 35 lpm

Relief Valve Pressure : 70 ~ 175 bar (6.9 ~ 17.2 MPa)

Application : Power Steering System

* Hydraulic Circuit
