

SB16C1052PCI

PCI to Dual-UART with 256-Byte FIFO Bridge Controller

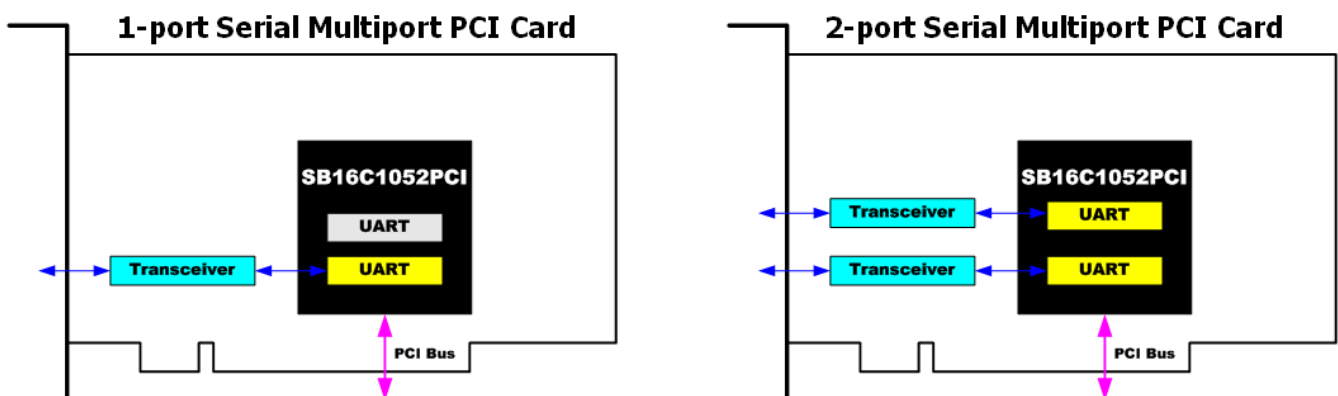

SB16C1052PCI is a single chip which enables two asynchronous serial communication ports to be connected to the PCI bus without any glue logic and it's the best solution to constitute a serial port for the PCI bus. It can enable customer to make easy and simple reference design as a one-chip solution for 1-port or 2-port Serial MultiPort Boards.

It includes SB16C1052, Dual UART with 256-Byte TX/RX deep FIFO developed by SystemBase. It also has enhanced features, global interrupt and dedicated control pins for RS422/485 auto toggling. The 256-byte FIFOs reduce CPU overhead and allow higher data throughput.
