

VH series

Vertical Type Injection Molding Machine

 Insert Molding

 Automation Optimization

 Minimize the spaced required for installation

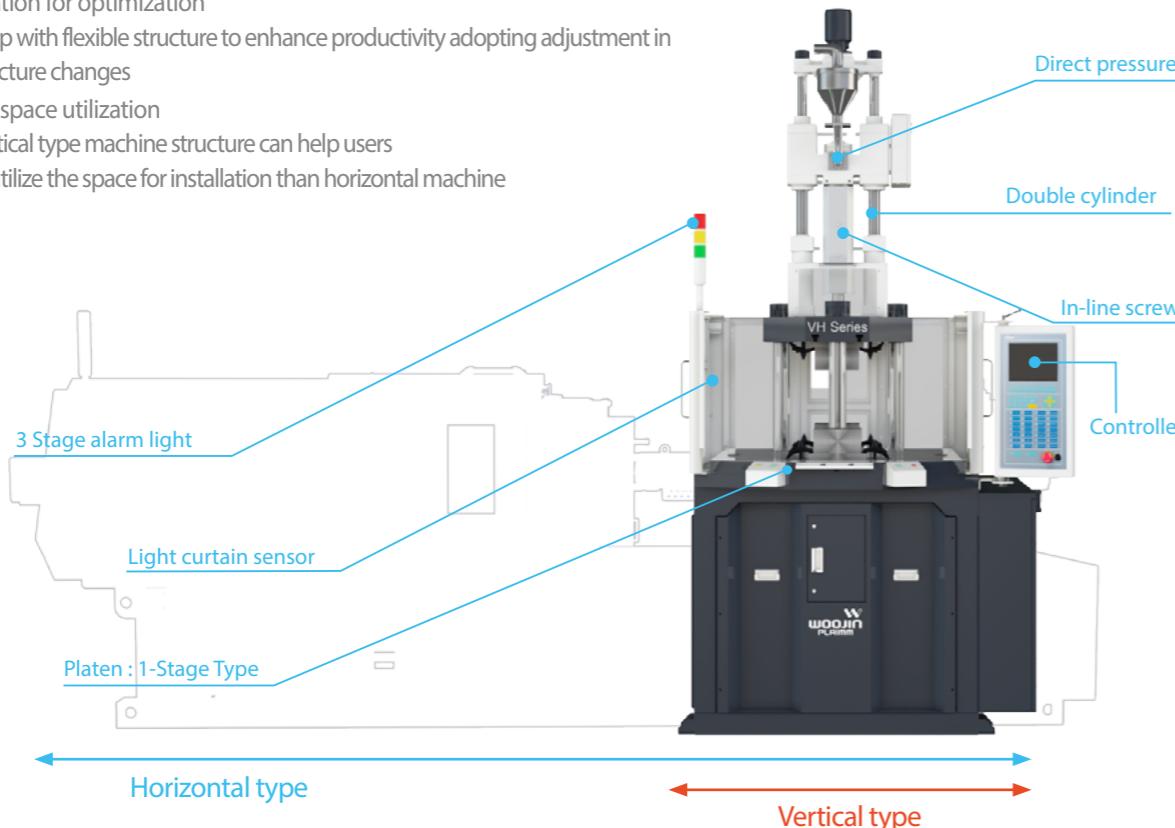

**WOOJIN**
PLAIMM

Machine series

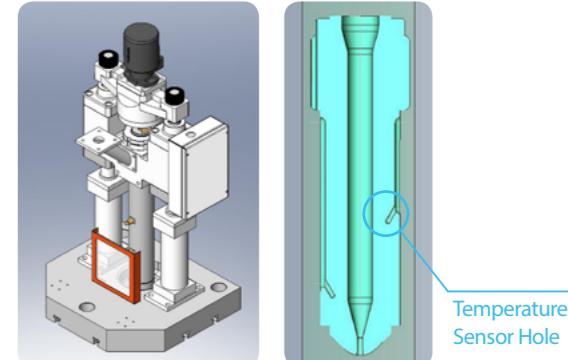

VH series

- Insert molding solution
Outstanding performance in integrating metal and film other than plastics
- Automation for optimization
Came up with flexible structure to enhance productivity adopting adjustment in the structure changes
- Brilliant space utilization
The vertical type machine structure can help users better utilize the space for installation than horizontal machine

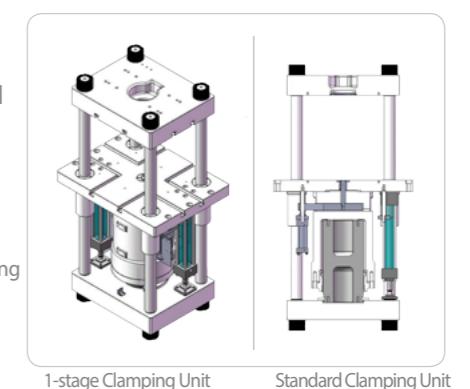

Standard Injection Unit Structure

- Apply various injection units: wide variety of injection units can be applied depending on the features of molded products
- Control for more precise molding and remote control the back pressure
- Basic application of double injection cylinder and in-line screw
- Control auto-tuning of synchronized heating in each barrel zone
Considering the features of each vertical barrel structure that the temperature goes up at different rate, each zone can be controlled in synchronization.
- Separate temperature control in upper end of the nozzle
Separately controls the temperature at the upper end of the nozzle for stable molding even for the resins not sensitive to temperature changes.
- Multi-stage control of injection/back pressure

Single Stage Hydraulic Clamping Unit

- Center hydraulic clamping unit helps maintain consistent mold clamping bearing to prevent distortion and high quality injection mold products despite lower clamping force.
- Enhanced user convenience setting the mold clamping force as needed to apply further pressure for clamping
- Light curtains sensor
Effectively prevent industrial accidents adopting light curtains sensor methods using safety lock module for user safety

VH series _ Clamping / Injection Matrix

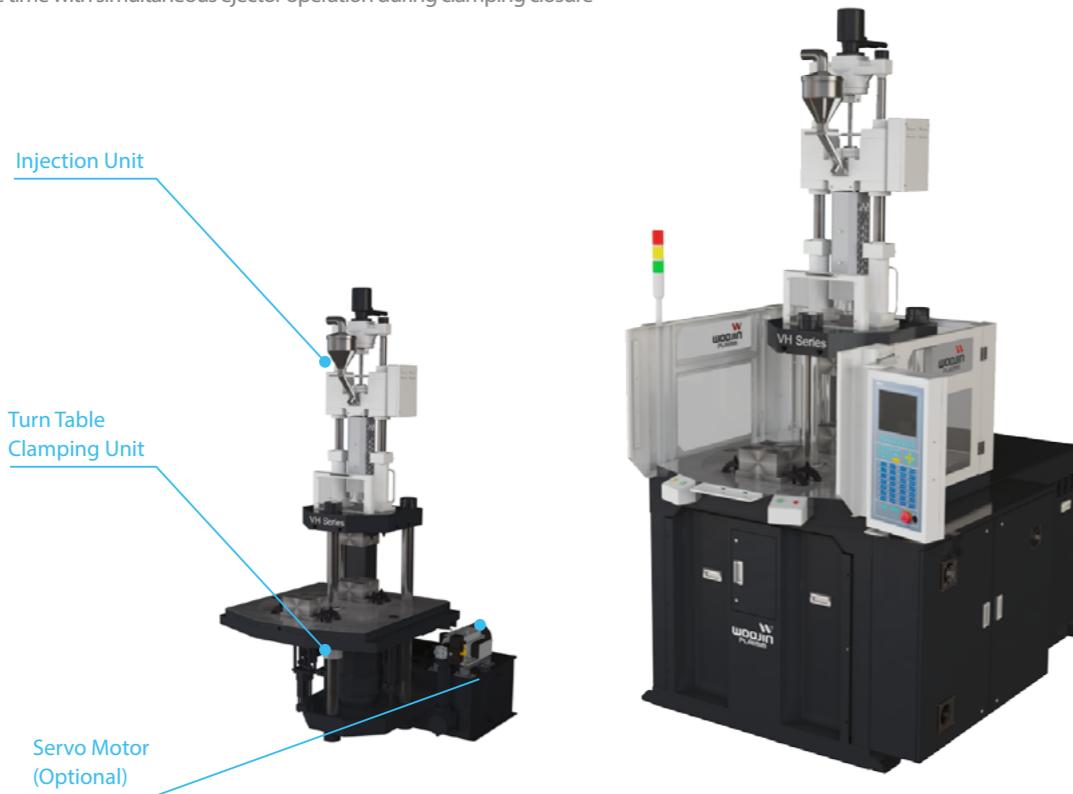

Model	Clamping force	Tie-bar distance(HxV)	Unit No.	Injection unit [Screw diameter in mm]							
				22	25	28	32	36	40	45	
VH50/VH50S	490kN	410x300	IH 1.4V	O	A	B

VH100/VH100S	981kN	520x380	IH 2.8V			O	A	B			
VH50R*/VH50RS	490kN	Ø880	IH 1.4V	O	A	B					
VH75R/VH75RS	735kN	Ø1000	IH 2.0V		O	A	B				
VH100R/VH100RS	981kN	Ø1100	IH 2.8V		O	A	B				
VH120R/VH120RS	1177kN	Ø1240	IH 3.9V			O	A	B			
VH150R/VH150RS	1471kN	Ø1350	IH 4.7V				O	A	B		

*R: Rotary table

VH-R series

Application of Basic VH Features

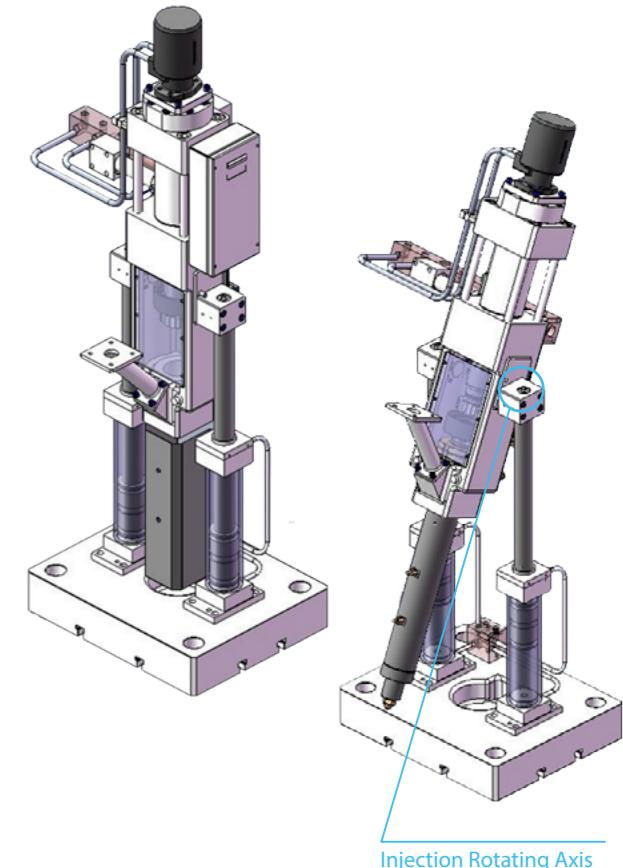

Use high performance servo motor and precision gear at the revolving table to realize accurate position control and high speed rotation
Reduce the cycle time with simultaneous ejector operation during clamping closure

Injection Unit

High Speed Injection Unit (optional)

- It enhances the product precision maintaining the stability adopting structure innovation which is rapid in response during high speed injection operation with in-line type structure in its high rigidity integration structure.
- It minimizes the position variation by adopting single type injection structure and minimizing the weight of injection unit for rapid response and precision control.
- It can control high speed injection with ACC servo valve. (Injection speed at 700mm/sec or above)
- Cylinder at nozzle touch section
- Stable nozzle touch with highly rigid nozzle touch cylinder load
- Better working condition when replacing the upright vertical injection cylinder screw as the injection unit can turn toward the nozzle touch cylinder

Energy Saving Solution (Optional)

Ultra precision safety control

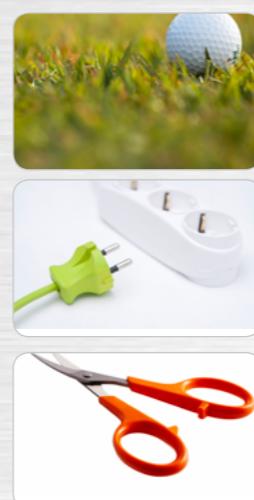

- Excellent representation of the system with feed-back control and servo pump system's closed-loop control by using AC servo motor (within 0.1%)
- High responsiveness with AC servo motor's hydraulic drive : 70ms
- Precise clamping mold protection with low speed precision location control

Energy saving and low noise level

- Controlling the number of servo pump system rotation with the AC Servo motor helps save energy and reduces noise (max 60% energy saving comparing to the general hydraulic drive types)

Saving coolants and oil

- Prevent the temperature rise of the oil controlling the rotation number by AC Servo Motor
- Save up to 25% of the coolant consumption
- Save up to 15% of hydraulic fluid

Clamping Unit

2-stage high speed turn table clamping type (RS series)

- Enhance the location precision and high cycle with servo driver's electronic signal control using the precision control method which decides the acceleration and deceleration and the position
- Simultaneous operation of ejector (R Series)
During clamping closure, it helps reduce the cycle time with simultaneous operation of ejector and further to enhance the productivity

① Precision Gear ② Decelerator ③ Revolving Table

Controller (ES600)

Installs multi-stage speed and pressure controls and precision position sensors for rapid response and designed user friendly monitor to enhance user convenience and practicality

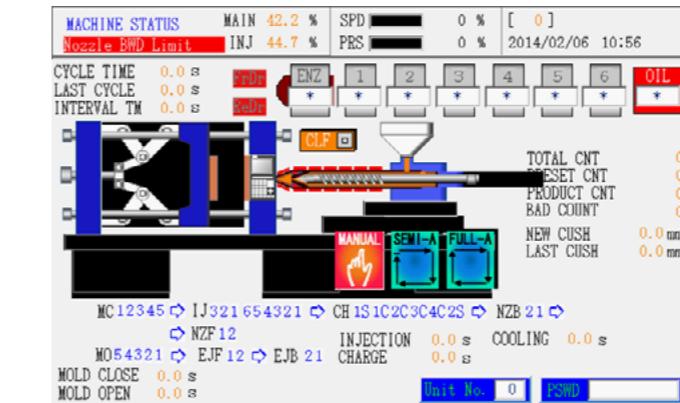

Functions

- Indicate the real time temperature changes on a graph
- Monitor the input and output
- Various core operation
- Production data storage
- Storage of molding condition changes and alert data
- Heater initiated pre-heating
- Indicate injection speed/pressure graph (Optional)
- Robot's interface circuit
- Rotation injection to raise injection capacity
- Molding data's internal storage : 100
- Molding data's external storage : CF memory card (512MB)use

Process Management

Snapshot of process management

It is designed to monitor the product operation in a single page report.

Alarm Function

Wide range of error management

Injection 6 Stages, Back Pressure 3 Stages, charging 4 Stages, Back Pressure 4 Stages, Spill Prevention Stages.

Sensor the defects by setting the max and min levels and standard charging system for Injection products

System Features

- Program System: Stored program system
- Memory Device: Flash-Rom
- Scan Time: 1ms
- Program Steps: 5,000
- Analogue Output: 4 Channel + 4 Channel
- A/D Converter: 4CH(Position) + 2CH(Analogue)
- High Speed Counter: 2CH + RPM
- Input: 48 Point + Possible 32 Expansion (Optional)
- Output: 48 Point + Possible 32 Expansion (Optional)

Technical Data

- Stored Program Control
- Internal Process Time Less than 1ms
- RS232 (Molding Resource, Fix Date, Sequence)
- PID Type Cylinder Temperature Control
- Temperature Input: K, J type
- CF Memory : Molding Source (500)
Display Storage
Short Data (1,000)
- Multi-Language Support (3 Languages):
Korean, Chinese, English
- 10.4inch TFT Color LCD (640X480)

Automatic Saving of a total of 100 Data made of 10 Sets of sub data.
Indicates heater temperature of each zone at every short phase,
each shot process, Injection, charging time, cushion position,
charging finish position.

Controller (GTB)

The high performance precision controller enables high speed high precision injection for closed-loop type (option) to guarantee the maximum safety and precision during operation.

Storing & Printing

Other than an internal storage device, users can easily store the molding and other relevant information and data in USB and print out as they want.

Multilingual Operation

Foreign languages such as English, Russian, Czech, Polish, Spanish and others are supported for easy manipulation of the machine in other parts of the world.

Setting Log

Users can store the changes they made hourly and print out the log of setting changes.

Central Monitoring System (Optional)

Central Monitoring Computer can have access to maximum 200 injection molding machines at the same time to facilitate the data transmission and management. Such injection related data will be converted into excel files for easier data management and retrieval.

System Features

- INTEL Celeron 600MHz 32bit Microprocessor
- 128MB SDRAM 128KB Cache Memory
- 1ms or Less System Internal Processing Time
- 10.4 inch TFT Color LCD (800*600)
- PID type Cylinder Temp Control
- Input/output Module Type
- USB Printer Port

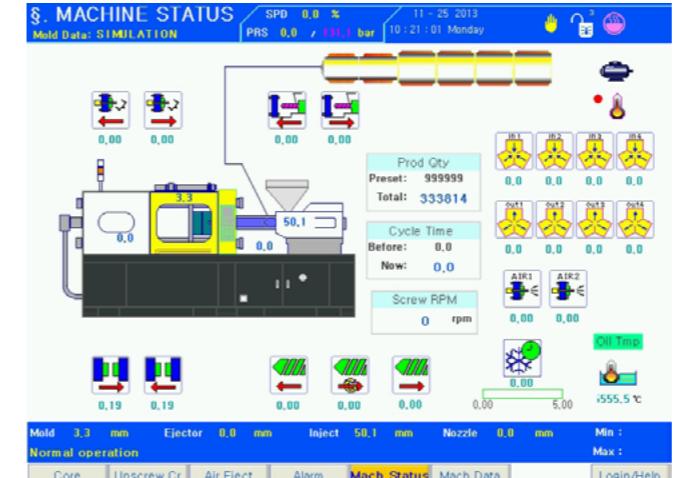

Position Transducer

Digital Sensor

- Effective positioning capabilities allow it to adjust the position and measure without having to reposition the machine all over again.
- Can be used semi-permanently for literally unlimited amount of time (over 100 Million Cycle)
- Excellent analysis of output signal
- Easy to use and install

Process Management

The Snapshot of Process Management

It offers a snapshot of the entire monitoring of equipments in operation.

Alarm Function

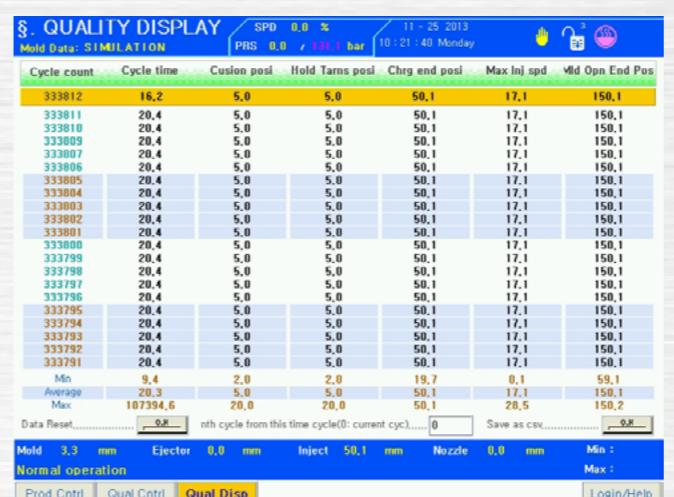

Wide range of management on errors and glitches

All the information is provided on possible errors and glitches during operation for accurate maintenance and repair.

Quality Management

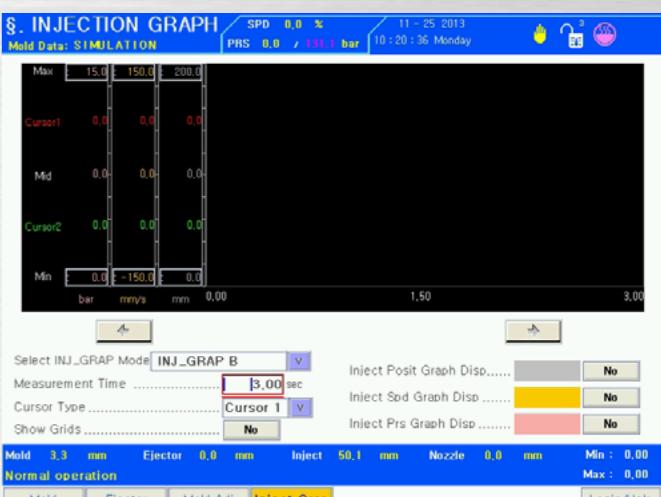

Accurate product management

Selective data storage and management for quality assurance under maximum 6 categories and trace back to 1,000 processes conducted in the past.

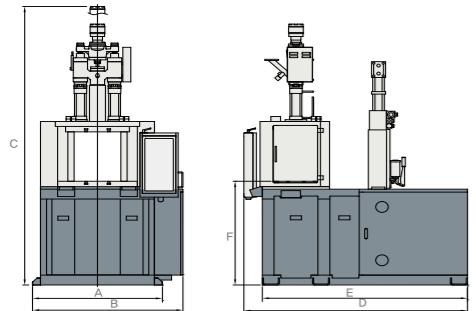

Graph Display

Convenient data visualization service

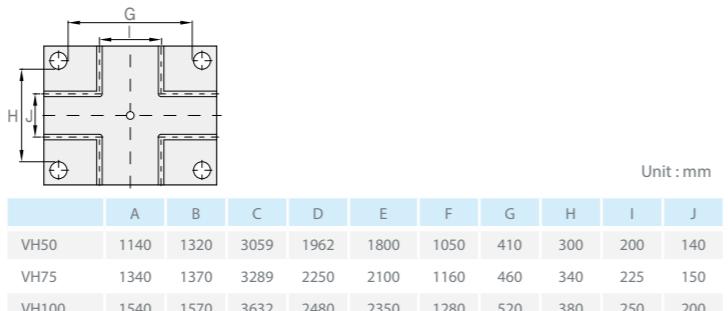

Detailed data on measured areas that a user may want are displayed in graph.
